Tooth Whitening with Opalescence Go

- Opalescence Go 6%
  - wear time: 60-90 min/day*

Dear patient,
You have decided to whiten your teeth with Opalescence Go, which is mainly done at home. Please observe the following points during application:

You can brush your teeth prior to use for better results. Remove the tray from the blister pack (U = Upper; L = Lower). You can wear the trays for the upper and lower jaws at different times.

Place the UltraFit tray into the mouth and center it on your teeth.

Gently suck down on the tray to bring the inner tray with whitening gel into contact with the teeth.

Remove the outer tray – it only serves as insertion purposes and can now be disposed of. The clear tray containing the gel will stay in your mouth.

Gently suck down again. Adjust the flexible inner tray to your row of teeth with your tongue and pouting your lips, if necessary, tightly adjust with a finger.

Please follow our instructions on wear time and duration. Then remove tray and brush your teeth, being careful not to swallow the remaining gel. The tray can now be disposed of.

General information:
- Protect gel and trays against heat and sunlight. Store the gel in the refrigerator, but please do not freeze.
- When wearing the trays, you should not smoke, eat or drink.
- Foods and drinks with a high acid content can lead to sensitivities.
- Interrupt treatment and inform us if major sensitivities of the teeth occur or in case of gum irritation.
- Avoiding staining foods, drinks and tobacco during the entire treatment period has a positive effect on the result.
- Cosmetic tooth whitening is not permitted legally for minors under the age of 18.

Dear patient,
Your teeth have now been whitened and no doubt you want to keep them bright for as long as possible.

You can make a major contribution by the things that you do. We would like to give you some tips to keep your smile beautiful.

During whitening treatment, your teeth may become slightly „dried“. As the teeth rehydrate, they will take in any moisture available. Thus you should avoid the intake of staining substances, such as coffee, black tea, coke, red wine, red fruits, red beetroots etc., as well as smoking as long as possible during the treatment breaks and the first few days after whitening of the teeth. During the following period, avoiding or limiting these foods, drinks and tobacco is beneficial for keeping the bright color of your teeth.

It is also very important to keep your teeth free of deposits. We therefore recommend thorough personal oral hygiene. We would be pleased to inform you about suitable aids and techniques for keeping these „problem areas“ clean.

You should also visit us for a „professional dental cleaning“ at regular intervals.

However, should your teeth darken slightly over the course of the next few years, which cannot always be avoided, – a short refreshment treatment can restore the brightness of your teeth. This does also not present any risk to your teeth. However, it is better not to use agents offered for „self-treatment“, as there is always a risk of damaging the teeth and/or gums.

Please make sure that you attend the check-up appointments we have arranged for you. If you have further questions, please contact us, we will be happy to advise you.

After Care for Your New Smile
